

UX Case Study Report:-

App: Flipkart

Flipkart is India’s leading e-commerce platform, serving millions of users daily. Its success depends on how efficiently users can browse, compare, and purchase products. This case study explores Flipkart’s **user journey**, evaluates its **strengths and weaknesses**, and proposes **three UX improvements** supported by sketches.

User Journey Analysis :-

Stage	Description	User Goal
Homepage	Personalized banners, deals, and categories	Discover products
Search	Keyword search, filters, recommendations	Find desired items
Product Page	Details, reviews, offers	Evaluate product
Cart & Checkout	Apply coupons, choose payment	Complete purchase
Post-Purchase	Track order, manage returns	Ensure satisfaction

Strengths & Weaknesses

Strengths :-

- Personalized recommendations
- Fast checkout process
- Real-time order tracking
- Wide product range

Weaknesses :-

- Cluttered homepage
- Complex filters
- Coupon confusion

Suggested Improvements

Improvement 1: Simplified Homepage

- Problem: Homepage feels crowded with multiple banners.
- Solution: Introduce a cleaner layout with fewer banners and a focus on personalized categories.

Improvement 2: Smarter Filters & Sorting

- Problem: Filters are overwhelming, with too many nested options.
- Solution: Introduce progressive disclosure filters — show only the most relevant filters first (e.g., price, brand, rating), then allow users to expand for

advanced options. Add a “Quick Sort” bar for common needs (e.g., “Best Rated,” “Fast Delivery”).

Improvement 3: Clearer Coupon Application

- Problem: Users often struggle to find applicable coupons and understand savings.
- Solution: Add a “Smart Coupon Assistant” that auto-applies the best coupon available. Show savings upfront on the product page and cart.

Simple Sketch for Improvement :

Flipkart UX Case Study - Sketches

1. Simplified Homepage

2. Smarter Filters

3. Smart Coupon Assistant

Conclusion :-

Flipkart's UX is strong but can be refined by simplifying navigation, clarifying filters, and improving coupon visibility. These changes would enhance usability, boost engagement, and strengthen brand loyalty.
